Dragonland

An innovative gaming protocol with an automatic burning functionality

Whitepaper v1.0

> Introduction

Welcome to the Land of Dragons, a gaming ecosystem which is aimed to build a vast Dragon gaming Universe and experience on the Binance Smart Chain allowing millions of players around the world to participate and compete in blockchain-based NFT games in a simple, fast and fun way. Each game will have a tokenized in-game assets allowing players to collect them as non-fungible tokens (NFTs). These games in the ecosystem will reward players based on their performance with Dragonland token and allow them to use these NFTs to enhance in-game capabilities and be sold in the marketplace for potential profit.

Land of Dragons Ecosystem

Land of Dragons is designed to leverage the blockchain assets concept of interoperability, wherein Dragonland token (Symb: DLD) can be utilized across multiple connected products. Having one utility token for multiple game titles offers various benefits to players and game publishers and will encourage players to explore the other games that are part of this connected ecosystem, and has the additional potential benefit that any content or tokens could increase in utility as the larger token ecosystem expands. Dragonland aims to generate an easy entrance to the blockchain gaming ecosystem and reduce the barrier to entry for non-blockchain developers and players .

DLD tokens will have the following use cases in Land of Dragons ecosystem:

NFT purchase

as a means to purchase exclusive NFT for DragonLand games

Gameplay registration fee

as the registration fee for all game modes.

Game rewards

All the registration fee for each game in addition to 70% of the transaction pool fee which is set to 1% will be used as a reward for players based on their gaming performance.

Our first upcoming multiplayer game to be released in Land of Dragons ecosystem is "Ozzy the Dragon", which is currently under development. The Dragonland token (Symb: DLD) will be used by players for characters upgrades and buying in-game assets to enhance player capabitlities (Such as, Dragons can be customized with different weapons, armors and players can team up for achieving missions).

It is worth mentioning that Every In-game Character or asset is represented by a non-fungible token (NFT). Owning this token means you are the sole owner. NFT Token will be based on the BEP-721 Standard. It will help players to manage easily their NFT's across Binance Smart Chain ecosystem and be able to sell them in the open market.

Land of Dragons creates a complete blockchain gaming ecosystem that will focus on connecting players, developers, communities, and distributors.

Token Protocol Features

Gaming Utility

Tokens are used for Game play registration, rewards, NFT minting & purchases

Burning Functionality

Automatic Burning fee is set to 1%. Burning increases token value and benefits the investor. This burning fee is sustained until 50% of the coin supply is burned.

Low Transaction Fee

Automatic Transacation fee is set to 1% and will go to the game reward pool. 70% of this pool will be used to rewards gamers based on performance. the rest will go into the games operation and future enhancement.

Advantages of Dragonland

Gaming Utility

This is the main functionality of Dragonland that will be expanding within our community. Our tokens will be used in our Ecosystem for upgrades, rewards and NFT minting and purchases.

Binance Chain Powered

Binance Chain is a proven network which powers thousands of applications. It is Ethereum compatible, more environmental friendly with low gaz fees and has one of the fastest block confirmation times.

Automatic Burning

Our smart contract has built-in automatic burning fee which will be sustained until 50% of the total supply is burned, benefiting early investors and assuring sustainable token growth.

Low Transaction Tax

Low transaction fee will benefit the In-game reward pool and encourage more token trading which will increase the token burning.

Dev team is aiming to partner with different blockchain ecosystems in the future to increase the value and use of Dragonland Token

⟩ Roadmap

Phases	Milestones
Phase 1	• Website release • Graphic Game Design • Social Media channels launch • Marketing and spreading awareness
Phase 2	• DxSale Presale • PancakeSwap public launch • "Ozzy the Dragon" beta release • NFT Marketplace public launch

Phases	Milestones
Phase 3	• CoinGecko and Coinmarketcap listing • Initial CEX listing • Dragonland team expansion
Phase 4	• Website update v2 • Airdrop and bounty campaign • "Ozzy the Dragon" official game release.
Phase 5	• Push marketing campaign • More CEX Listings • IOS and Android mobile game version release.
Phase 6	• Dragonland Global Championship launch • Ecosystem new games releases • Other ecosystem expansion and interoperability bringing more token use and value

How to Buy

Buy BNB

The easiest way to buy BNB is through a centralized exchange (CEX) like Binance or Coinbase

Send BNB to wallet

Transfer BNB from Step 1 to your Metamask wallet . Ensure that you are connected to Binance Smart Chain
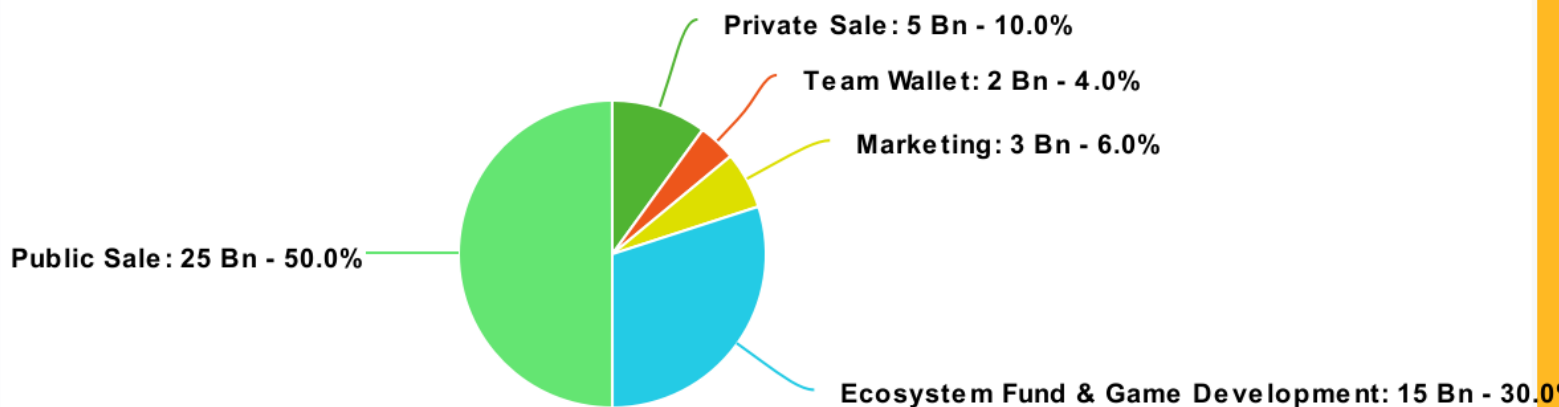

Buy in Pancakeswap

After presale is done , you will be able to swap your BNB for Dragonland tokens in Pancakeswap.
It is important to adjust the slippage to 2-3% to avoid any transaction error

Tokenomics

Private Sale: 5 Bn - 10.0%

Team Wallet: 2 Bn - 4.0%

Marketing: 3 Bn - 6.0%

Public Sale: 25 Bn - 50.0%

Ecosystem Fund & Game Development: 15 Bn - 30.0%
